

Stop Cell Phone Spys New iPhone Security Voice Encryption App Stops Eavesdropping Cell Phone Spys Providing Wiretap Proof Cell Phone Calls

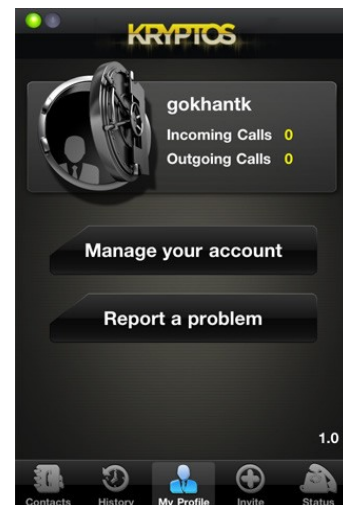

Get Secure, Private iPhone Cell Phone Conversations

Visit www.KryptosCom.com For More Information And Secure Purchase Links

A new iPhone security app has been released to provide wiretap proof cell phone calls and help stop eavesdropping, cell phone spys. The Kryptos personal and business app uses AES military grade voice communications encryption to enable users to talk freely without fears that their conversation can be heard or recorded by any eavesdropping, wiretapping cell phone spys.

Visit <http://www.KryptosCom.com> for more information, screen shoots, specs and links to the iTunes app store secure purchase area.

A recent report from InfoSecurity Magazine noted that 70% of mobile users do not use data encryption on their mobile devices. The number of business and personal cell phone users not using voice communications encryption to stop cell phone calls from being heard or recorded by eavesdropping and/or wiretapping cell phone spys is believed to be much higher.

The Kryptos voice communications security app utilizes 256 bit AES military grade encryption to encrypt cell phone calls between users. For added security the app uses 1024 bit RSA encryption during the symmetric key exchange. The Secure Voice Over IP (VoIP) application can provide VoIP connectivity for secure calls over several networks including 3G, 4G and WiFi to protect business, personal and government related information secure, safe and private.

Free International Calling - As an additional bonus this app also enables users to make free International calls because the service is VOIP based.

This new mobile phone app features:

- > Fast Secure Download From The Apple iTunes App Store
- > Easy Installation
- > Personal Individual ID
- > Easy to manage technology
- > Secure Peer-to-peer Calling
- > 256 bit AES military grade encryption
- > Secure Calls Over 3G, 4G and WiFi Networks
- > An easily affordable, low monthly service fee

As the access to cellular phones and mobile devices has evolved so has the propensity for security threats in regards to interception of calls made and received. Most people are not aware of how simple it is for hackers to use readily available tools, devices, etc., to intercept standard cellular calls. This new iPhone security app provides an easy, affordable solution.
